

# Team Idea Interchange Session

Activity #3, Mar 01 2023

The team swap session was really useful today. It is a great chance to rectify our mistakes and also receive a token of appreciation for the work we did. Few changes were recommended by the team **Default Gestalts**. They recommended a few changes and explained the mistakes we made in our design.

## Few Recommendations:

- ★ There is more than one way to get back to the home and search page which is not required.
- ★ It is better to add more interactive charts and images so that the user would relate more.
- ★ If the data is able to be narrowed down enough by filtering, we could eliminate navigating to another page for a longer write-up and could just include the longer write-up as part of the search results

## Confusing:

- There are no sort/filter options to do both searches at the same time. Now, it filters just one (i.e. focus area or region) at a time.

## Missing:

- More graphical data and charts are missing here. It is really mandatory and useful for users to visualise the data.
- The main purpose (Report) of the design is really missing in this design.
- When moving from search results to any long-form content on another page, include a back button to return to the search results

These were comments given by the **Default Gestalts**

But I really agree that the filtering options need to be updated with specific filter options and also agree that we need more charts to visualise the data. After reviewing their design, I think we need to add a few more features to our design (i.e., adding UN sustainable goals, more charts and insights of the website and report).
